

# Day 1,2,3 task

## Output:

### CSS Session

#### Day-1

#### CSS Introduction

CSS (Cascading Style Sheets) is a language designed to simplify the process of making web pages presentable. It allows you to apply styles to HTML documents by prescribing colors, fonts, spacing, and positioning. CSS separates content from styling and enables reuse across pages. HTML uses tags, and CSS uses rule sets. CSS styles are applied to the HTML element using selectors.

##### Topics covered in this page:

1. CSS-text-align,background-color,font-family
2. Types-Inline,Internal,External

##### What is CSS?

CSS (Cascading Style Sheets) is a stylesheet language used to style and design web pages. It controls the appearance of HTML elements, such as colors, fonts, sizes, spacing, borders, backgrounds, and layouts. CSS helps make web pages attractive, organized, responsive, and user-friendly.

##### why you are learning path css?

CSS is in the learning path because it is an essential part of web development used to style and design HTML webpages. After learning HTML to create the structure of a webpage, CSS is learned to control its appearance, layout, colors, fonts, spacing, and responsiveness. Learning CSS helps create attractive, organized, and user-friendly websites and provides the foundation for learning advanced frontend technologies.

## Types of CSS Fonts

- Monospace Fonts: The font in which every letter have equal width.
- **Serif Fonts: Have small stroke at the edge of each letter.**
- San-Serif Fonts: Clean fonts with out any strokes.
- *Fantasy Fonts: Decorative fancy fonts.*
- Cursive Fonts: The font that resembles human handwriting.

## Why Use CSS?

CSS SAVES TIME: YOU CAN WRITE CSS ONCE AND THEN REUSE SAME SHEET IN MULTIPLE HTML PAGES.

google fonts

Pages Load Faster: If you are using CSS, you do not need to write HTML tag or attributes every time. Just write one CSS rule of a tag and apply it to all the occurrences of that tag.

**EASY MAINTENANCE: TO MAKE A GLOBAL CHANGE, SIMPLY CHANGE THE STYLE, AND ALL ELEMENTS IN ALL THE WEB PAGES WILL BE SUPERIOR STYLES TO HTML: CSS HAS A MUCH WIDER ARRAY OF ATTRIBUTES THAN HTML, SO YOU CAN GET A FAR BETTER LOOK TO Y**  
**MULTIPLE DEVICE COMPATIBILITY: FOR THE SAME HTML DOCUMENT, DIFFERENT VERSIONS OF A WEBSITE CAN BE PRESENTED FOR DIFF**  
**GLOBAL WEB STANDARDS: NOW MOST OF THE HTML ATTRIBUTES ARE BEING DEPRECATED AND IT IS BEING RECOMMENDED TO USE CSS**

### Topics covered in this page

1. text and text property
2. font and font property

## Selectors

CSS universal selector is a special selector that selects all the elements in an HTML document. It is denoted by an asterisk mark (\*).

CSS element selector selects and styles specific HTML elements. The element selector is defined by simply using the element's name in the stylesheet.

CSS class selector selects an element with a specific class attribute. The class selector is defined using a period (.) followed by the class name.

CSS ID selector selects an element with a specific value for its id attribute. It is denoted by the "#" (hash) symbol.

CSS group selector allow us to apply same style to multiple elements at a time. Name of elements are comma-separated. The group selector keep CSS concise and avoid redundancy.(ex:){h1,h3{...}}

### Topics covered in this page

1. Selectors:universal,grouping,element,class,multiple class,id
2. color names-rgb,rgba,hexadecimal,hexadecimal(hexa),hsl(hsl->Hue, Saturation, and Lightness. hsla->hslalpha),hsla coloring system
